

Primary Market Drivers

Earnings & Economic Data

Welcome to the biggest earnings week of the season! 177 S&P 500 companies will be reporting this week, which represents 35.4% of the index itself. Big tech will be the main event, with Google (GOOGL 10/29), Microsoft (MSFT 10/29), Meta (META 10/29), Apple (AAPL 10/30), and Amazon (AMZN 10/30) on tap. Expect these announcements to be the primary focus this week. Other notable releases include UnitedHealth Group (UNH 10/28), Visa (V 10/28), Caterpillar (CAT 10/29), Boeing (BA 10/29), Starbucks (SBUX 10/29), AbbVie (ABBV 10/31), Chevron (CVX 10/31), and Exxon Mobil (XOM 10/31), among many others. On the economic data front, CPI was a surprise release last Friday (amidst the ongoing government shutdown) and came in below expectations (+0.3% vs +0.4%). We will see September Core PCE on 10/31 as well, giving us an updated picture on inflation.

Fed Policy

The Fed will release its policy decision this Wednesday (10/29). Odds for a 25bps rate cut remain at near certain levels for both Wednesday's decision (96.7%) and December 10th's decision (95.8%). With a softening labor market and cool inflation readings, there should be no surprises to close out 2025 barring something unforeseen. As always, we will be watching Powell's press conference and any updates to the dot plot, but for once we expect little drama surrounding this month's Fed meeting.

Tariff Policy

Despite the recent tension between the US and China regarding trade, the two sides agreed to a new framework deal on the sidelines of the ASEAN-US Summit in Kuala Lumpur on Sunday evening. The agreed upon framework assuages all recent concerns. The US will pause or eliminate new tariffs while China delays its rare earth export restrictions for at least one year. China will increase its purchases of US soybeans and agricultural goods to narrow the trade deficit, while the US will gain greater access to Chinese rare earths. Xi and Trump are expected to hammer out the final details, but the announcement represents significant de escalation and eases global market pressures. Futures soared higher on news of the new deal, and it appears this round of tariff drama has come to a close.

Current Environment Summary

What's Working	What's Not	What's Next
Inflation Subdued	Tariff Policy Uncertainty	Earnings: MSFT, META, AAPL, AMZN, GOOGL
Strong Earnings Growth	Stubborn Elevated Interest Rates	More Earnings: UNH, V, CAT, BA, XOM
AI & Tech Revolution Bull Market	Uncertain Labor Market	177 S&P 500 Companies Report (35.4%)
Trade & Global Investment Deals	Prolonged Government Shutdown	Fed Policy Decision (10/29)
Resilient Consumer		September Core PCE (10/31)
Fed Easing		Reaction to new US / China trade deal

Portfolio Manager Commentary

Ken Hartley, CFA

You can tell that a dog has been mistreated when you try and pet it and the animal moves its head, almost cowering. Many investors are starting to feel that way as the markets continue their climb to new 52-week, if not all-time highs. As Don talks about in his commentary (below), maybe the headwinds have subsided, and the US (and maybe global) economy may be catching a tail wind.

The US government posted a budget surplus for the month of September, welcome news. A closer look below the surface tells a story of accounting gimmicks and expense deferral that will need to be dealt with in the coming months. Remember, September 30 is the end of the fiscal year for the US government. Like an individual that is trying to reduce the amount of taxes paid in a year, the government is doing the opposite. By pushing expenses into October, the September budget runs a surplus, but at some point, the expenses will need to be accounted for. This may lead to additional debt issuance. Watch the bond market for an appetite for more supply.

The US and China have agreed to a “framework” for a trade agreement that could avert the November 1st tariff deadlines. China agrees to ease restrictions on rare earth metals and to buy additional soybeans from US farmers. While on the surface this seems like a positive development, China has a history of falling short on their promise to import things from global trading partners. A year from now, if China is sticking to their promises, the global economies can focus on growth.

With the government shutdown there has been very little (if any) economic information coming from the related agencies. The CPI was released on Friday and showed a slight cooling and a drop in future expectations. This gives the Fed some breathing room to cut this month and in December. Look to Fed Chair Powell’s testimony for clues on what the wizards of monetary policy are considering.

Trust is hard earned and easily lost. The market seems to be sensing clearer sailing ahead. What a pleasure it would be if we can jettison some of the concerns that have haunted the markets for 2025 and focus on growth prospects and increased economic prosperity.

Don Moenning

It’s nearly November, and I remain as bullish as ever as we enter the home stretch. 2025 has thrown a lot of headwinds at this market – the tariff saga, stubborn elevated yields, a slow Fed, geopolitical instability, high valuations, market concentration, international economic weakness, housing market fatigue, etc. Despite all of this, it’s been quite easy to remain glass-is-half-full with such a strong earnings backdrop.

With the biggest earnings week of the season on tap (35.4% of the S&P 500 is reporting), it’s time for big tech to shine and remind everyone that this bull market is, first and foremost, fundamentally driven. This week is all about Microsoft, Meta, Google, Apple, and Amazon. I do not expect to be disappointed. I expect capex to remain astronomical, AI and cloud services growth to remain robust, and outlook and guidance to continue to surpass expectations. What I said last quarter remains true this quarter as well – I’m looking to big tech earnings to reinforce the demand stability of the AI supercycle.

So, no doubt this week will be important. But as we enter the final months of the year, I’m looking around it’s not just earnings that are keeping me glass-is-half-full. The headwinds are fading (and fast) just as seasonality turns positive.

The Fed may have been dragging its feet for most of the year, but now we find ourselves on the cusp of a second consecutive rate cut with a third in December a near certainty. The new US / China agreement has assuaged recent concerns over global market instability and major supply chain issues (so long as it gets done). 10 year yields are sitting right at 4%, threatening to break below any day now. Mortgage activity is recovering a bit following a general downtrend since the beginning of the year. Inflation remains cool, the labor market is softening but still strong, and consumer spending is stable. Finally, seasonality turns extremely positive soon.

Generally speaking, it’s hard not to like the setup for November and December. If earnings can deliver once again, expect Santa Claus early.

Investors should carefully consider investment objectives, risks, charges and expenses before investing. Some risks to consider are:

Equity Market Risk : *Economic, market, political, and issuer-specific conditions and events will cause the value of equity securities to rise or fall. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.*

Value Investment Risk : *Value stocks may perform differently from the market as a whole and following a value-oriented investment strategy may cause a portfolio to underperform equity funds that use other investment strategies.*

Small Company Risk : *Securities of small companies are often less liquid than those of large companies and this could make it difficult to sell a small company security at a desired time or price. As a result, small company stocks may fluctuate relatively more in price. In general, smaller capitalization companies are also more vulnerable than larger companies to adverse business or economic developments and they may have more limited resources.*

Tax Advantage Strategy Risk : *An investment strategy that considers the tax implications of investment decisions may alter the construction of portfolios and affect portfolio holdings, when compared to those of non-tax managed. The Clarus Wealth Advisors anticipates that performance of a tax-managed portfolio may deviate from that of non-tax managed portfolios.*

Cyber Security Risk : *Clarus Wealth Advisor’s use of internet, technology and information systems may expose the Portfolio to potential risks linked to cyber security breaches of those technological or information systems. Cyber security breaches, among other things, could allow an unauthorized party to gain access to proprietary information, customer data, or fund assets, or cause a portfolio and/or its service providers to suffer data corruption or lose operational functionality.*
